Case Study

ALIVE

About Cipla

Established in 1935, Cipla is a global pharmaceutical company committed to improving access to high-quality medicines. Cipla's portfolio spans branded generics, complex generics, OTC products and select specialty therapies across segments such as respiratory, cardiology, central nervous system, anti-infectives, urology and HIV.

Cipla has a strong presence across key global pharmaceutical markets, supported by trusted brands, deep prescriber relationships, scale manufacturing capabilities, and an extensive distribution network. As competitive intensity rises within the industry, Cipla is increasingly focused on deepening its position in select therapies and geographies where it has a clear and sustainable right to win, rather than pursuing broad-based expansion.

Case Study: AI-Enabled Prioritization with Integrated Trend Analytics

The global pharmaceutical market is highly competitive across most major therapy areas. Meaningful and sustainable growth increasingly comes from identifying the right opportunities within therapies, based not just on current market size, but also on evolving trends shaping future demand and competitiveness.

Market data provides rich insights at both therapy and sub-market levels, including prescription volumes, sales value, pricing trends, competitive intensity, and brand rankings. However, transforming this data into sharp, forward-looking, decision-oriented insights remains a key challenge.

At the same time, pharmaceutical demand and competitiveness are increasingly influenced by broader dynamics such as:

- Emerging disease and treatment patterns
- New drug approvals and innovation pipelines
- Patent expiries and IP landscapes
- Environmental shifts (e.g., air quality, climate-linked disease incidence)
- Geopolitical and macroeconomic factors affect drug access and supply chains.

Cipla is keen to explore how structured analysis, supported by AI-based tools, can integrate internal datasets with external signals to uncover actionable insights that guide market and opportunity-space prioritization.

Objective

The objective of this case study is to develop a data-driven approach, supported by AI-based tools, to help Cipla identify and prioritize opportunity spaces within the Cardiac market where it has a strong and sustainable right to win. The analysis should **integrate current market dynamics and relevant external trends to generate forward-looking insights on which opportunities are most likely to outperform over the next 3–5 years and where Cipla should focus investments.**

Deliverables

- a. **Develop an AI agent that analyzes the Cardiac market dataset shared as part of the case study, along with relevant external signals, to identify and prioritize opportunity spaces that are most likely to outperform the broader Cardiac market over the next 3–5 years. Opportunity spaces may include sub-segments, molecule classes, molecule combinations, treatment archetypes, or other relevant market clusters.** *Participants should be able to explain the agent's objective, data inputs, prioritization framework, key metrics used, and how it evaluates trade-offs between market attractiveness, future potential, competitive intensity, and strategic fit.*
- b. **Using the AI agent's outputs, supplemented by secondary research, answer the following questions:**
 - What are the Top 3–5 opportunities identified by the AI agent, and which 2–3 should Cipla actively prioritize? Include the key metrics used by the agent, trade-offs observed between metrics (e.g., market size vs growth, growth vs competition, attractiveness vs right-to-win), and how those trade-offs were resolved.
 - What is Cipla's right to win in each shortlisted opportunity, and how does it compare with the strengths of key competitors?
 - Which attractive opportunity spaces appear underpenetrated by Cipla today despite strong long-term potential, and what actions would be required to build a stronger position?
 - What are the key strategic implications for Cipla? Where should the company double down, build capabilities, take a selective approach, or avoid further investment?

Guidelines:

- For the first round, your deliverable should be 3 slides (excluding cover slides). Avoid context setting (pharma landscape etc)
- Candidates shortlisted for the Top 5 presentations will be required to deliver a detailed presentation (7–10 slides)
- During the Finale, the agent may be tested
- Mention sources for the external data used in Appendix section
